

Extends QuickBooks into a Complete Utility Billing Package

The SDI philosophy of software product development began in the 1970's based on a simple principal of, "Choose one thing to do and do it well." The SDReader6 suite of tools fulfills the promise of that principal. Coupled with solid product offerings, SDI provides, what is often called their best asset, excellence in customer service.

After a massive development effort, Significant Digits delivered the first SDReader system in 1993. It was the first Microsoft Windows based route management application offered to the meter reading industry and that first customer remains a customer to this day. Thus SDI started a tradition of excellence in software engineering, embedded systems development and customer service that the SDReader6 product suite is destined to carry on. Through the integration of WEB based features, satellite GPS technologies, seamless product tool integration and feature rich software development tools, the SDReader6 product suite has leaped far ahead of their competition once again. In a single summation, SDI strives to be the premiere software engineering services provider to their market through a relentless commitment to total customer satisfaction. SDI takes great pride in their ability to provide the highest quality products for the lowest possible price. Their products are on the forefront of the fast moving wave of technology. Moreover, SDI is constantly developing and re-engineering ways to better serve their customers by utilizing the latest trends in technology, software development and finding unseen ways to improve the industry.

SDReader6, SDMobile, SDIComplete and SDReaderCE meet the Open System Foundation Goals for compatibility. This allows the data to be rapidly imported into a number of host packages such as databases and spread sheets for additional management reporting.

SDIComplete

SDICOMPLETE is a state of the art, industry leading, billing package that meets the ever evolving meter reading and route management system requirements.

Developed in the Microsoft .Net framework, SDICOMPLETE provides a simple, user friendly tool with these features:

- Utilize all the features of QuickBooks with the added power of SDICOMPLETE
- Employs an intuitive Graphical User Interface
- A minimum of 11 mouse clicks is all that is needed from the beginning to the end of the SDICOMPLETE process
- Manage the general ledger, payroll, etc. in addition to route management billing
- Complete freedom in managing service costs
- Manage customers entirely inside SDICOMPLETE
- Easily move a meter from one customer account to another
- Service setup is easy and completely customizable
- Services can be setup as metered, non-metered or surrogate
- Service prices are fully customizable. Charge a base price plus consumption or just consumption or any other way desired
- Configure the high/low calculations that are sent to the reading device
- Billing periods are completely customizable. Bill once a month, once a quarter, once a year or any-where in between
- Utilize powerful searching functions to quickly find any customer or meter
- Exporting and importing the route file only takes a few clicks
- Creates invoices for each customer to be synced into QuickBooks
- SDICOMPLETE stores backup copies of the invoices for each customer
- Enter coordinates for mapping, or let SDReader6 configure them by using 911 addresses
